NASHVILLE, TENNESSEE 37203

F O R E W O R D

This Annual Report is compiled by the Tennessee State Agricultural Stabilization and Conservation Service (ASCS) to provide program data and statistics on the operations of our County ASCS Offices during 1972.

The Agricultural Stabilization and Conservation Service is the agency of the U. S. Department of Agriculture that administers specified commodity and related land use programs designed for voluntary production adjustment, resource protection, and price, market, and farm income stabilization.

Our appreciation is extended to County and Community ASC Committee-men, county office personnel, representatives of other agricultural agencies, farmers, and farm organizations who contributed to the success of our farm program in 1972.

ADMINISTRATIVE

The Administrative activities, supervised by the State Office for the 95 counties in Tennessee, deal primarily with management, personnel, training, budget, fiscal, office space, equipment and supplies.

Allocations of administrative funds are computed on the basis of a measured volume of work and basic costs for operating each county.

The State Office assists counties in obtaining adequate space with satisfactory arrangement, lighting, utilities, and parking. In many instances this space is in the same building with other agencies of the Department.

Guides on the type and quantity of equipment for proper operation of the office are furnished counties. Inventories are reviewed and approval given for permanent type equipment.

Distribution of all forms and envelopes is made through the State Office. Assistance is furnished to county offices for ordering office supplies through the General Services Administration.

Personnel man-day ceilings are established for each county. Counties are required to obtain approval for changes in the job classifications and for reinstatement of any position that is vacated through separation or resignation. A job description is established for each position.

Elections are held in the fall of each year. Three community committeemen and two alternates are elected in each ASCS community in the county. These community committeemen, in turn, elect one county committeeman each year for a three year term and two alternates for a one year term beginning on January 1.

CONSERVATION PROGRAMS

RURAL ENVIRONMENTAL ASSISTANCE PROGRAM

The Rural Environmental Assistance Program (REAP), successor to the ACP, is a voluntary cost-share program. It offers cost-sharing (generally on a 50-50 basis) with farmers to carry out needed conservation and environmental measures. Program emphasis is on long-term farm-related conservation and environmental problems in rural areas. Practices with substantial public benefits at the least possible public cost are given highest priorities. Higher cost-share levels are authorized for low-income farmers (up to 80 percent). Major considerations in authorizing cost-sharing are the resulting public benefits, such as pollution abatement, enduring soil and water conservation, recreation, wildlife and open space.

EMERGENCY CONSERVATION MEASURES

Emergency Conservation Measures are authorized under REAP in designated disaster areas, where needed, to rehabilitate farmland damaged by natural disasters.

In 1972 special emergency assistance was approved in one county to correct damage to farmland caused by excessive rainfall and flooding. Available emergency funds permitted farmers in this county to repair or correct land damages caused by these natural disasters and/or to prevent further deterioration or erosion of productive farmlands. Without this emergency assistance the newly created conservation problems would have further impaired the land and adversely affected its productive capacity. The necessary repair or restoration work would have been so costly that the farmers would have been unable to carry out the needed conservation measures without emergency cost-sharing which amounted to about 80 percent of treatment costs.

APPALACHIAN LAND STABILIZATION AND CONSERVATION PROGRAM

The Appalachian Land Stabilization and Conservation Program is authorized only in certain designated counties in the Appalachian states. The program provides assistance for land stabilization, erosion and sediment control, reclamation and conservation treatment measures. This is accomplished through long-term cost-sharing contracts (3 to 10 years) with land-owners and operators in the designated areas. Federal cost-shares range up to 80 percent of treatment costs. Cost-sharing is limited generally to not more than \$50 per acre for a maximum of 50 acres per farm. Counties designated for this program are located in areas having the greatest economic growth potentials. The currently designated program includes the Roaring River Watershed portion of Jackson, Overton, and Putnam Counties.

CROPLAND ADJUSTMENT PROGRAM

The Cropland Adjustment Program is designed to divert the use of cropland from the unneeded production of feed grain and allotment crops on a long term basis to needed conserving uses. Agreements with eligible producers were offered in 1966 and 1967 for periods of from 5 to 10 years. The program supplemented the annual commodity acreage diversion programs and, through Greenspan, provided for more open space and other recreational opportunities for urban areas. Specific incentives were offered to farmers if they shared their land facilities with the public (public access). Emphasis was given to the development of hunting and fishing areas through conservation practices designed to foster wildlife. Some of the existing CAP agreements will remain in effect through 1976.

CROPLAND CONVERSION PROGRAM

The Cropland Conversion Program was offered on a pilot basis during the period 1963-67 for agreements up to 10 years. The program was designed to improve family farm income by helping farmers convert cropland, primarily used for production of surplus row crops and small grains, to long-range income producing uses, such as forests, grass, water storage, wildlife habitat, or recreational facilities. Some of the existing agreements will be effective through 1975.

FEED GRAIN PROGRAM - 1972

The Agricultural Act of 1970, approved November 30, 1970, initiated a cropland set-aside approach for the 1971-1973 feed grain crop years. The Act designated the feed grains to be corn and grain sorghum - and barley, if designated by the Secretary of Agriculture. For 1972, barley was included in the program. The Act established a limit on the amount of payments a person could receive annually under the program.

The program was voluntary, and producers with corn, grain sorghum base, or barley base were eligible to participate in the program. By participating in the program, producers could:

- 1 Earn payments for setting aside an acreage on the farm equal to 25 percent of the farm feed grain base and devoting this acreage, as well as the farm conserving base acreage, to approved conserving uses,
- 2 Devote the remaining cropland to any crops not subject to marketing quotas, and
- 3 Qualify for loans and purchases on all feed grains produced on the farm.

For 1972, feed grain producers had two other plans to designate additional set-aside acreage for payment:

Option A - The producer could set aside up to 10 percent of the combined corn-grain sorghum base, and up to 20 percent of the barley base. This acreage was guaranteed to be accepted for payment. In addition, the producer could further designate additional set-aside acreage of 5 or 10 percent of the farm's corn-grain sorghum base if the government would accept. All additional acreage offered for set-aside was accepted by the government.

Option B - If the producer did not want to participate in Option A, the operator could elect to set-aside additional acreage up to 10 percent of the combined corn-grain sorghum base, and setting aside the full 10 percent, the operator could also offer another 5 percent of the corn-grain sorghum base, subject to acceptance by the government. As under Option A all additional set-aside acreage was accepted. Under Option B the plantings of feed grains on the farm were limited in 1972.

The objectives of the program were to:

- 1 Maintain feed grain production at levels that would satisfy current needs and provide adequate but not excessive reserves,

- 2 Protect and improve farm income,
- 3 Provide greater flexibility for producers in their individual farming operations, and
- 4 Help the United States maintain a competitive position in world markets.

The feed grain base acreage for individual farms remained substantially the same as for 1971 , and is based on the average feed grain acreage grown on the farm during 1959-1960.

1972 COTTON PROGRAM

The Upland Cotton Program authorized under the Agricultural Act of 1970 was part of an over-all program designed to give farmers more flexibility in planning farming operations, protecting income, and keeping production in line with anticipated needs.

Some of the principal provisions of the 1972 Program were:

- 1 Marketing quotas and penalties were not in effect for 1972.
- 2 The national allotment for 1972 was the same as the allotment for 1971, 11.5 million acres.
- 3 For full allotment protection a producer was required to have planted or considered planted at least 90 percent of his allotment.
- 4 Only an owner could transfer allotment acreage from a farm he owned to a non-allotment farm he owned or had full control of.
- 5 The county committee determined whether or not cotton could be transferred by sale or lease across county lines.
- 6 Temporary transfers approved in 1972 could not extend beyond 1973, and
- 7 A producer on a farm with an allotment of 10 acres or less to qualify for a small farm payment was required to live on the farm and earn more than 50 percent of his income on the farm.

Signup. To participate in the 1972 program, a producer was required to have an allotment, sign up at the ASCS office (there was no provision for automatic participation), meet the set-aside requirements, and maintain the farm's conserving base.

Set-Aside Requirement. To participate in the program, a producer was required to set aside and maintain an acreage of land equal to 20 percent of the base acreage allotment, and devote this land to a conserving use. This acreage was in addition to the farm's conserving base.

Conserving Base. Each producer who participated in the cotton program was required to maintain the conserving base established for the farm.

Payment Yields. Payments for 1972 were based on the average yield of harvested acreage for the three preceding years except that the 1970 projected yield was substituted for the actual yields for 1969.

1972 Cotton Program (Continued)

Price Support Payments. Producers who complied with all the requirements for the 1972 program earned a price support payment computed as follows:

15 cents per pound times the per acre yield times the allotment for the farm.

Price support payments were shared as the producers shared in the crop. Exceptions to the payment shares could have been approved by the County and State Committee in very unusual cases.

The maximum set-aside payment per person under the 1972 Cotton Program was \$55,000 per year.

Release and Reapportionment. The release and apportionment provisions were basically the same as in prior years.

PEANUTS

Peanuts are under acreage allotments and marketing quotas. Such quotas are established each year by the Secretary of Agriculture. They are effective only when at least two-thirds of the growers voting in a referendum favor such quotas. This is a means of controlling production and guaranteeing the farmer a favorable price for his peanuts through the Price Support Program. On December 6-10, 1971 growers voted in a referendum favoring quotas for the years, 1972, 1973, 1974.

RICE

Tennessee is one of the rice producing states designated as a "Producer State". The Agricultural Adjustment Act of 1938, as amended, provides for the designated states to apportion the State rice allotment among rice producers in the State.

A producer who desires to allocate all or part of his producer allotment to a farm in another county can file an application for county and State ASC Committee approval.

Lauderdale	2	575	575
TOTAL	2	575	575

TOBACCO PROGRAM - 1972

Marketing quotas for burley tobacco under a poundage program were in effect. The Secretary proclaimed the quotas which growers voting in a referendum overwhelmingly approved for 1971, 1972 and 1973.

Acreage allotments were in effect for fire-cured and dark air-cured tobacco. Growers had voted in a 1970 referendum favoring quotas for 1970, 1971 and 1972.

The quotas in pounds or acres mean controlling production and assuring the farmers of a reasonable price for the tobacco under a price support program. Growers who planted within their acreage allotments of fire-cured and dark air-cured and did not use DDT or TDE were eligible for price support on the entire crop. The burley growers with quotas who did not use DDT or TDE were eligible for price support up to 110% of their effective quotas. The undermarketings for 1972 will be added to the 1973 burley poundage quota. Marketings over 100% of effective quota will be charged to the 1973 poundage quota.

Lease and transfer programs were available where growers could transfer quotas in case of burley and acreage allotments in case of fire-cured and dark air-cured tobacco between farms within the same county.

1972 VOLUNTARY WHEAT PROGRAM

The goals of the 1972 Wheat Program were to give farmers more flexibility in planning their farming operations, protecting farm income, keeping production in line with needs, and putting a greater reliance on the market place for farm income.

The national wheat allotment was called a national domestic allotment. The domestic allotments were used to determine the amount of acres to be set aside on each farm and the total domestic marketing certificates a producer could receive under the wheat program. There was a maximum payment limitation of \$55,000 per person. Payments were divided among all producers on a farm as they shared in the crop, unless a different division was justified and agreed to, with the approval of the COC.

A farmer who met the set-aside and conserving base requirements was permitted to plant all the wheat he wished on the farm's remaining cropland acreage. The set-aside requirement was an acreage of cropland equal to 83% of the farm domestic wheat allotment. Also, if the farm in 1972 had at least 55% of the total farm cropland in summer fallow, the farm was considered to have met set-aside requirements.

There was an additional voluntary set-aside provision authorized for the 1972 crop program which was an additional voluntary set-aside of wheat cropland equivalent to 75% of the farm's domestic allotment. The payment rate was 94 cents per bushel times the farm's established yield times the acreage voluntarily set aside.

Producers who failed to plant at least 90 percent of their domestic allotment or an authorized substitute crop would be subject to a reduction up to 20 percent in their 1973 domestic allotment.

Producers who signed up, set aside the required number of acres, and maintained the farm's conserving base, were eligible for non-recourse price support loans on the farm's entire wheat production.

There was no cross compliance for wheat in 1972. A producer could sign up in the program on one farm but did not have to on any other farm which he operated.

Under crop substitution provision, acreage planted to feed grains in excess of half the base could have been considered planted to wheat to prevent loss of allotment. Soybeans could have been substituted for wheat planting to protect allotment history.

1972 COMPLIANCE OPERATIONS

The Secretary of Agriculture is required by law to provide for determining acreages of feed grains, wheat, cotton, peanuts, tobacco and rice, when programs are in effect, and to make such other acreage and land use findings as are necessary to determine compliance with the applicable program provisions.

Compliance determinations are made by requiring the farm operator to report and certify the data for his farm. This method is known as COMPLIANCE BY FARMER CERTIFICATION.

COMPLIANCE BY FARMER CERTIFICATION is accomplished by requiring participating farmers to report the acreage of crops and land uses for various programs. It applies to farms participating in the Set-Aside Program on Wheat, Feed Grain or Cotton. Farmers producing crops subject to marketing quotas, such as peanuts, rice, DAC and DFC tobacco, are required to certify the acreages planted to any of these crops. The operator or farms participating in the REAP report their practices. The certification of compliance is required on farms participating in the Cropland Adjustment, Cropland Conversion and the Appalachian Land Stabilization Program.

A portion of the farms for which acreages are reported and certified are visited for administrative control purposes to check the accuracy and reasonableness of reported acreages.

MEASUREMENT SERVICE is available to farm operators upon request and at a reasonable cost. This service may be used to determine the amount of crop to be planted, or the amount of crop already planted, or to establish official acreages for cropland fields that have not been measured previously. The known acreages can be used to reduce cost of production of the crop and assures full program compliance.

AERIAL PHOTOGRAPHY. A part of the compliance operation is maintaining an up-to-date set of aerial photographs for each county in the state. The photographs are enlarged from an aerial negative to a desired scale. New photography is obtained for the entire state every five or six years. See map "Status of Aerial Photography Coverage" as of September 1972, which shows the latest photography available.

The aerial photographs are to scale accuracy and are used by ASCS in determining acreages devoted to crops and compliance with various program provisions. It has been determined that this is the most efficient and economical means of determining a large number of acreage determinations.

The aerial photographs may be purchased and used by other Federal agencies, state, county and city highway planning groups, by private organizations and individuals who need scaled photographs of large areas in planning their operations. Any person interested in purchasing photographs can obtain information and necessary forms for ordering photographs at any ASCS office or from the State ASCS office.

PRICE SUPPORT PROGRAMS

Farmers in Tennessee received price support through loans and purchases on barley, corn, cotton, oats, soybeans, and wheat. Tobacco was supported through advances from producer associations. Wool is supported through an incentive program to increase production.

Cotton loan notes were prepared at the county ASCS offices and by approved cotton loan clerks located at banks, gins and cotton companies. All loans were disbursed by the county offices; however, producers whose notes were prepared by approved cotton loan clerks could obtain loan advances at the place where their notes were prepared. Loan advances from approved cotton cooperative marketing associations were available to members of the associations.

In conjunction with price support operations ASCS makes loans to farmers for purchase or construction of grain storage and drying facilities. Only commodities which the farmer produces in compliance with ASCS programs are considered in determining need and eligibility for the facility. The loan may cover as much as 85 percent of the cost of the facility, not including the cost of materials and labor for concrete work or electrical wiring. The maximum term of the loan is 5 years. Loans usually are repaid in 4 annual installments. The interest rate is 6 percent per year on the loan balance.

Wool is an essential and strategic commodity not produced in sufficient quantity in the United States. It is the policy of Congress to encourage an annual domestic production of about 300 million pounds of shorn wool. The Secretary is directed to establish an incentive price for shorn wool which will encourage larger production. To encourage producers to sell wool for the best price possible, the incentive payment to the individual is determined by applying the percentage payment rate to his net sales proceeds. Payments are also made for wool on lambs that are sold before their first shearing. The price of mohair is supported through a similar incentive program.

ASCS operates a program for indemnification of dairymen whose milk was removed from market because of contamination by pesticides that are registered and approved by USDA. Also, beekeepers are indemnified for loss of honeybees destroyed, through no fault of the beekeeper, by registered and approved pesticides.
